

MONITORING REQUIREMENTS NOT MET FOR
HENRY MILLER LIBRARY WS

Our water system failed to monitor as required for drinking water standards during the past year and, therefore, was in violation of regulations. Even though this failure was not an emergency, as our customers, you have a right to know what you should do, what happened, and what we did to correct this situation.

NOTE: This is a formal regulatory requirement. We do not serve water for drinking from our well. All faucets are marked ‘Non-Potable.’

We are required to monitor our water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our water meets health standards. During 2020 and 2023, we did not collect a source sample for nitrate in time and therefore, cannot be sure of the quality of our water during that time.

What should I do? There is nothing you need to do at this time.

We did not test within required timeframe for Nitrate in 2020 and 2023. We should have taken samples within the calendar year both years and failed to do so. We collected samples for Nitrate testing in 2021, 2022 and on 1/2/2024. All test have come back negative for contaminants.

For more information, please contact Magnus Toren at 831-667-2574 or magnus@henrymiller.org

.....

NOTE: Water from our well has been consumed by visitors and residents at the Henry Miller Library since 1965. Since 2005, due to regulatory requirements, we have been putting chlorine in the water and have posted ‘Non-Potable’ on each water outlet.
